Glossary

- **Occupancy:** Calculated by the number of occupied rooms divided by the number of available rooms that physically exist in a STR.
- **Average Daily Rate (ADR):** Represents the average rental income per paid occupied room in a given time period; however, ADR itself cannot be used to measure a STR's performance.
- **Revenue per Available Room (RevPAR):** Calculated by multiplying a STR's ADR by its occupancy rate, an increase in RevPAR most likely indicates an improvement in occupancy rate and can be used to measure a STR's performance.
