# Measuring Canadian Travel Patterns

April 3, 2024 Update

2024 Weekly Report

# Purpose

- The Measuring Canadian Travel Patterns report was created to help industry understand their weekly domestic visitors
- By combining the weekly STR report and Environics' VisitorView data, industry has up to date insights for their destination and can plan strategically how and what visitors to attract
- This report focuses on visitor analysis to **British Columbia**

# VisitorView Methodology

- Environics Analytics uses privacy compliant, anonymized mobile movement data to identify devices whose **Daily Common Evening Location** is 60 km or more away from their *Yearly Common Evening Location*.
- Data is aggregated and compared on a weekly basis versus the previous year and week.
  - **(Note:** Year over year data may not compare the **exact** same date range).
- Data is limited to devices that we can reliably infer their *Daily* and *Yearly* Common Evening Locations.
- Data has been standardized and normalized leveraging demographic data and **PRIZM**, their neighbourhood classification system.

## Notes:

- Data is based on the movement of mobile devices travelling within BC from BC or the rest of Canada who have spent one night 60 kms from their mobile device's home location. Therefore it includes all mobile movement - work and contractor travel, relocations within six months' time, visiting friends and relatives and people moving around their own regions.
- The baseline of comparison is 2023, with percentages above 0% indicating higher rates of visitation in 2024 than 2023, and percentages below 0% indicating lower rates of visitation in 2024 than 2023.
- Weekly comparisons may not reflect the exact same date between the two comparison years. Therefore holiday weekends may fall on different weeks and result in higher peaks in the current year. Please refer to the Appendix for date conversions.

# STR Methodology

- On a daily, weekly and monthly basis, STR processes performance data from hotels all across BC and the world. This data is submitted straight from the source: chain headquarters, management companies, owners and directly from independent hotels. The data used to understand the BC tourism regions' performance compared to BC as a whole and to each other.
- STR delivers confidential data on hotel occupancy, Average Daily Rate (ADR) and Revenue per Available Room (RevPar), for markets such as the tourism regions of BC and for individual companies who participate.

- **Participate in the STR “STAR” report: Submit your data and receive free reports benchmarking your performance against your market. Sign up today for free here:**

# Glossary

- **Occupancy:** Calculated by the number of occupied rooms divided by the number of available rooms that physically exist in a short-term rental.
- **Average Daily Rate (ADR):** Represents the average rental income per paid occupied room in a given time period; however, ADR itself cannot be used to measure a short-term rental performance.
- **Revenue per Available Room (RevPAR):** Calculated by multiplying a short-term rental ADR by its occupancy rate, an increase in RevPAR most likely indicates an improvement in occupancy rate and can be used to measure a short-term rental performance.
- **Domestic Overnight Visitors:** Extrapolated from a sample of mobile devices that spent at least one night more than 60KM away from their Yearly Common Evening Location.
- **Common Evening Location:** A location where the device is normally seen between 6PM and 8AM the following morning.

# Notes

## Long **Weekends and Holidays:**

- New Years Day
- Family Day
- Good Friday
- Victoria Day
- Canada Day
- B.C. Day
- Labour Day
- Truth & Reconciliation Day
- Thanksgiving Day
